A Brief History

From humble sail-making beginnings, Structurflex began life as Sails & Covers Ltd on 21 July 1937. Structurflex has consistently pursued opportunities and developed new skills to become one of the world's leading suppliers of innovative tensile membrane structures.

In 2005, Structurflex Middle East Contracting LLC was established in Dubai, United Arab Emirates as representative operations for Structurflex Group headquartered in New Zealand to pursue the growing demand in the MENA region for innovative tension membrane structures.

In 2012, Structurflex Middle East Contracting LLC management responsibility moved to Mr. Maged Mounir and new Era for the operation began.

WE PROVIDE THE BEST SOLUTIONS.

STRUCTURFLEX ME services start from the design development stage throughout the comprehensive engineering process until the actual projected execution and completion. Our services support various applications and projects starting from sports, commercial, transport, and public shades.

Capabilities

STRUCTURFLEX ME is a specialized contractor in tensile membrane structures utilizing HDPE, PVC, PTFE & ETFE, and STFE Membranes

Our Service

- Design
- Engineer
- Fabricate
- Erection and Installation
- Inspection of Existing Membrane
- AMC

MANAGING PARTNER'S MESSAGE

As the world continues to emerge from the challenges posed by the pandemic COVID-19, I would like to extend my heartfelt appreciation and gratitude to each one of you. At Structurflex ME, the health and safety of our colleagues, customers, partners, and communities remains our topmost priority.

We understand that meeting our customer's requirements is crucial to the success of our organization, and we have worked diligently to ensure that our clients receive exceptional service. Our years of experience have allowed us to understand our clients' needs deeply, and we strive to exceed their expectations with every project.

Furthermore, we remain steadfast in our commitment to environmental awareness and sustainability. As we strive to prevent climate change and resource depletion, we recognize the importance of preserving the environment for future generations. We are dedicated to ensuring that our operations are environmentally conscious and sustainable. As we move forward, we are committed to adapting to the new normal and ensuring that our operations align with the current landscape. Our team has worked tirelessly to implement measures to safeguard the health and well-being of our stakeholders while delivering the highest level of service possible.

I want to express my sincere appreciation to all of you who have placed their trust in us and supported our journey thus far. We remain committed to providing innovative and customized solutions to meet your needs, while contributing to the growth and development of our industry.

Thank you for your continued support, and we look forward to working with you in the future.

AL JAMEA TUS SAIFIYAH
NAIROBI, KENYA

EMPOWERING ARCHITECTURAL VISIONARIES WITH ENGINEERING PRECISION

CASE STUDY: ENHANCING ARCHITECTURAL EXCELLENCE WITH SINGLE SKIN ETFE TENSILE MEMBRANE AT AL JAMEA TUS SAIFIYAH, NAIROBI, KENYA

INTRODUCTION:

IN THE HEART OF NAIROBI, KENYA, STANDS A REMARKABLE TESTAMENT TO ARCHITECTURAL INNOVATION AND EXCELLENCE — THE AL JAMEA TUS SAIFIYAH PROJECT. STRUCTURFLEX MIDDLE EAST CONTRACTING LLC HAD THE PRIVILEGE OF BEING THE CHOSEN PARTNER TO BRING THIS VISIONARY PROJECT TO LIFE. THIS CASE STUDY DELVES INTO THE JOURNEY OF TRANSFORMING ARCHITECTURAL CONCEPTS INTO REALITY, HIGHLIGHTING THE SEAMLESS COLLABORATION BETWEEN STRUCTURFLEX AND AL JAMEA TUS SAIFIYAH.

IPROJECT OVERVIEW:

THE AL JAMEA TUS SAIFIYAH PROJECT AIMED TO CREATE AN ARCHITECTURAL MARVEL THAT MARRIES CULTURAL HERITAGE WITH MODERN ENGINEERING. THE CHALLENGE LAY IN CRAFTING AN ETFE TENSILE MEMBRANE ROOFING STRUCTURE THAT NOT ONLY SYMBOLIZED ELEGANCE BUT ALSO PROVIDED FUNCTIONALITY AND DURABILITY. THIS ENDEAVOR ALIGNED PERFECTLY WITH STRUCTURFLEX'S EXPERTISE IN INNOVATIVE SOLUTIONS AND ARCHITECTURAL MASTERY.

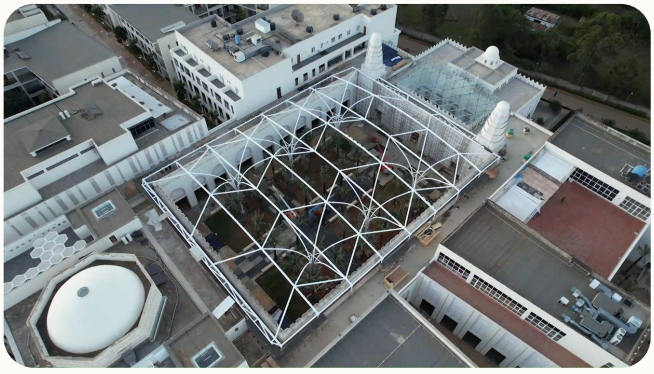
AL JAMEA TUS SAIFIYAH
NAIROBI, KENYA

ELEVATING ARCHITECTURAL EXCELLENCE THROUGH INNOVATION

THE JOURNEY: FROM DESIGN TO CONSTRUCTION:

THE JOURNEY COMMENCED WITH METICULOUS DESIGN AND ENGINEERING, WHERE STRUCTURFLEX'S TEAM OF EXPERTS COLLABORATED CLOSELY WITH AL JAMEA TUS SAIFIYAH TO ENSURE THAT EVERY DETAIL ALIGNED WITH THE PROJECT'S OBJECTIVES. THE SINGLE SKIN ETFE TENSILE MEMBRANE EMERGED AS THE IDEAL CHOICE, SEAMLESSLY INTEGRATING FORM AND FUNCTION.

CONSTRUCTION PRESENTED ITS OWN SET OF CHALLENGES, INCLUDING PRECISE INSTALLATION AND MAINTAINING THE HIGHEST QUALITY STANDARDS. THE DEDICATION OF THE TEAM ENSURED THAT EACH STEP WAS EXECUTED FLAWLESSLY. THE RESULT WAS AN AWE-INSPIRING STRUCTURE THAT NOT ONLY CAPTURED THE ESSENCE OF AL JAMEA TUS SAIFIYAH'S VISION BUT ALSO EXCEEDED EXPECTATIONS.



AL JAMEA TUS SAIFIYAH
NAIROBI, KENYA

DESIGNING SPACES,
CREATING LEGACIES

ARCHITECTURAL EXCELLENCE UNVEILED:

THE COMPLETION OF THE SINGLE SKIN ETFE TENSILE MEMBRANE PROJECT WAS MET WITH ADMIRATION AND ACCLAIM. THE ARCHITECTURAL MASTERPIECE STOOD TALL, CASTING ITS GRACEFUL SHADOW ON THE NAIROBI LANDSCAPE. THE ETFE MEMBRANE, KNOWN FOR ITS EXCEPTIONAL PROPERTIES, PROVIDED BOTH NATURAL ILLUMINATION AND PROTECTION, REFLECTING STRUCTURFLEX'S COMMITMENT TO SUSTAINABLE INNOVATION.

AL JAMEA TUS SAIFIYAH
NAIROBI, KENYA

STRUCTURFLEX: PIONEERING THE ART OF ARCHITECTURAL ENGINEERING

IMPACT AND SIGNIFICANCE:

THE AL JAMEA TUS SAIFIYAH PROJECT STANDS AS A BEACON OF COLLABORATION AND INNOVATION. IT NOT ONLY ADDS TO THE ARCHITECTURAL MAGNIFICENCE OF NAIROBI BUT ALSO SERVES AS A SOURCE OF PRIDE FOR AL JAMEA TUS SAIFIYAH AND STRUCTURFLEX ALIKE. THE PROJECT SHOWCASES HOW VISIONARY DESIGN, ENGINEERING PROWESS, AND UNWAVERING COMMITMENT CAN TURN DREAMS INTO REALITY.

CONCLUSION:

THE SINGLE SKIN ETFE TENSILE MEMBRANE PROJECT AT AL JAMEA TUS SAIFIYAH IS A TESTAMENT TO THE POWER OF COLLABORATION AND EXPERTISE. STRUCTURFLEX'S ROLE IN THIS ENDEAVOR HIGHLIGHTED OUR DEDICATION TO PUSHING THE BOUNDARIES OF ARCHITECTURAL INNOVATION. THIS CASE STUDY ENCAPSULATES THE JOURNEY FROM CONCEPT TO COMPLETION, SHOWCASING THE TRANSFORMATION OF A VISION INTO AN ICONIC ARCHITECTURAL MASTERPIECE.

The Al Janah Pavilion | January 2021

Structurflex Middle East Contracting LLC was proud to be the specialized contractor for the Al Janah Pavilion project, a striking architectural landmark located in Sharjah’s Aljada mega-project. The project was a collaboration between Arada Developments LLC and American University of Sharjah's undergraduate architecture students, who designed and developed the pavilion during a year-long design studio and practicum course.

The design team, led by Associate Professor Jason Carlow, investigated and developed thick building envelopes that were responsive to the local climatic conditions of the Gulf region and inspired by vernacular architecture from the Middle East and North Africa (MENA) region. The resulting design of the Al Janah Pavilion was a contemporary interpretation of the cellular, subdivided Muqarnas ceiling vaults found in traditional Islamic architecture. The canopy was transformed into a complex, self-structural, shading structure that spanned 130 square meters.

Structurflex Middle East Contracting LLC played a crucial role in making the design concept into reality. The company's expertise and experience in structural engineering and fabrication allowed the complex nodal structure to be adjusted comprehensively in response to estimated structural loads. The company worked closely with the design team to ensure the member thicknesses and space frame depth could be adjusted along with overall dimensions and arc curvatures.

Steel rectangular tubes were precisely rolled into curving arcs and welded together to form the trusses and beams, while triangular fabric panels spanned between the inner and outer layers of the structure to create a thick, spatially dynamic composition which cast playful shadows as the sun moved across the sky. The resulting structure provides an iconic focal point and a contemplative space for people to gather.

Structurflex Middle East Contracting LLC is proud to have been a part of this unique and innovative project. The company's commitment to delivering practical and economical solutions to complex architectural designs is evident in the success of the Al Janah Pavilion project. The project is a testament to the importance of collaboration, expertise, and innovation in creating successful architectural projects that enrich and inspire their communities.

Ethiopia Pavilion | August 2019

Oromia Regional
Addis Ababa, Ethiopia

Structurflex Middle East Contracting LLC is proud to have been a part of the Unity Park project in Ethiopia, specifically the Ethiopia Pavilion "Oromia" in Addis Ababa. The project presented a unique opportunity to showcase the rich cultural heritage of the Oromia region while highlighting the country's commitment to promoting unity among its diverse population.

Our team at Structurflex ME was contracted to provide support for the project, from the design concept to the final build. We took the lead in developing a practical and economical solution that would bring the Pavilion to life, while also ensuring that it met the project's specifications and requirements.

Our approach to the project was driven by our commitment to quality and excellence. We leveraged our expertise and experience to develop a design that was not only functional but also visually stunning. Our team of skilled professionals worked tirelessly to ensure that every detail was perfect, from the intricate patterns on the Pavilion's exterior to the layout of the interior exhibits.

The result is a breathtaking Pavilion that seamlessly integrates with the surrounding Unity Park. The Pavilion showcases the rich culture of the Oromia region through its stunning design and educational content. Visitors to the Pavilion can immerse themselves in the region's history, traditions, and way of life, making it an essential stop for anyone visiting Unity Park.

Our team at Structurflex ME is proud to have been a part of this project, and we are excited to see the Pavilion continue to be a symbol of unity and cultural pride for Ethiopia for years to come.

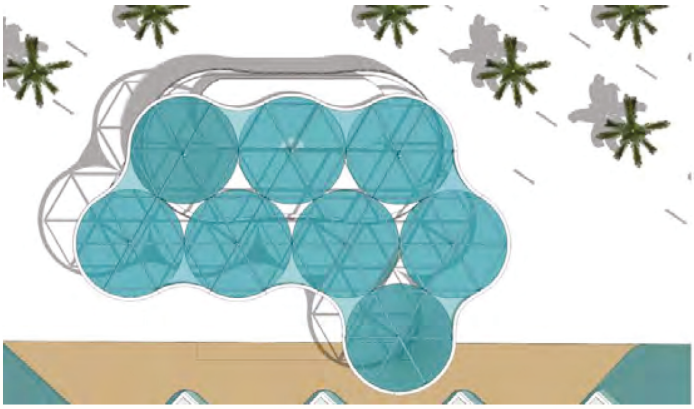
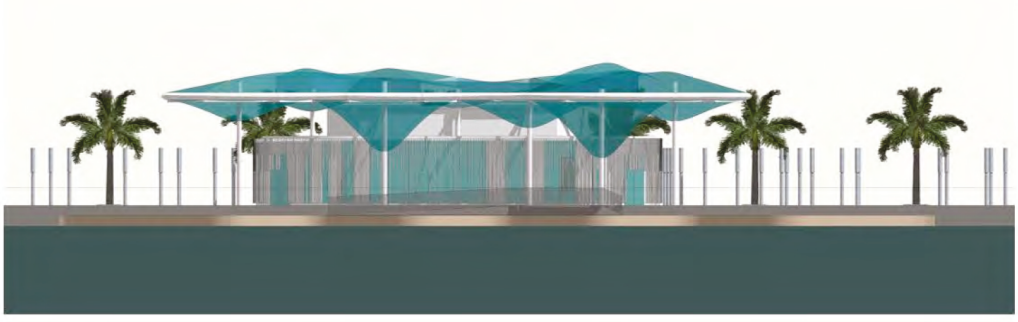
ATKINS

ATKINS



ATKINS



Floating Station Canopy

Dubai, UAE

The challenge – improve existing design concept to create a more practical solution

The Floating Station was the first commercial Smart Floating to open in Dubai. Located at one of the iconic retail shopping Mall Dubai Festival Mall – Marina Side which is one of the landmarks destinations in UAE

Structurflex ME was contracted to provide tensile membrane roofs for the floating station. We recognised early on that the initial roof concepts was not fully developed with potential

ATKINS

ıs, so used our

ɔrove the

structurflex

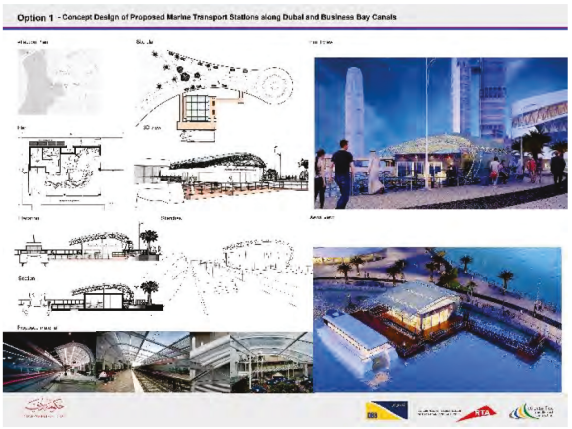
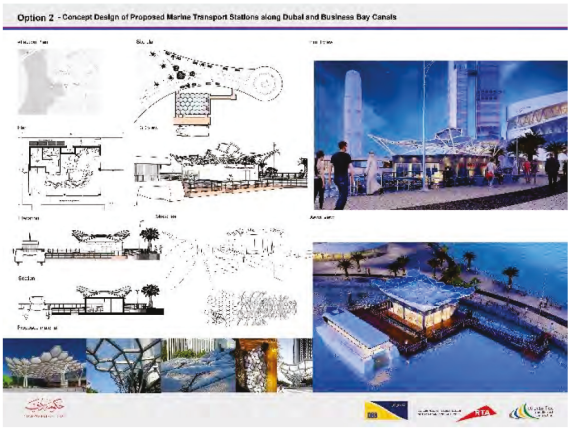
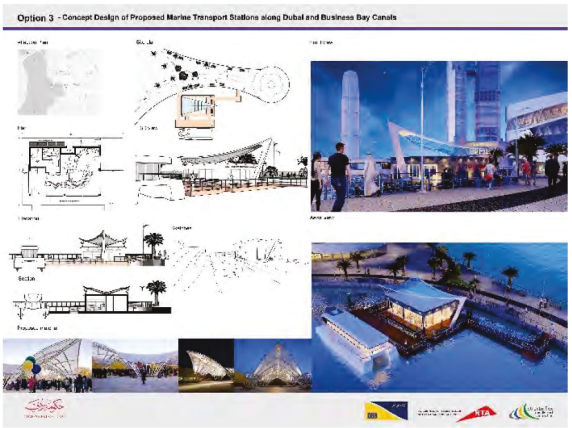
contracting







Floating Station Canopy

Dubai, UAE

The solution – a practical, economical roof that's compatible with the original architectural concept

The structurflex ME technical and design teams delivered a practical and economical solution that eliminated water ponding risk and reduced the amount of steel framing required. our improved design also stayed true to the original concept, so the project architect was happy to approve all our suggested modifications.

However, client was anxious to see more design concepts to choose from.

Therefore, Structurflex ME developed 4 design concepts during the design development stage.

structurflex
middle east
contracting

Floating Station Canopy

Dubai, UAE

The Conclusion – a spectacular Design concept full developed

Following the finalisation of the design concept, our team proceeded with full engineering, fabrication and installation of the steel frames and tensile membranes.

We supported the client/ Architect in all material selection;

350mm ETFE was especially printed in Italy. And PTFE fabric was procured from Germany. They we fast tracking project activities to deliver the project in very challenging timeframe to meet the prescheduled grand opening of the station.

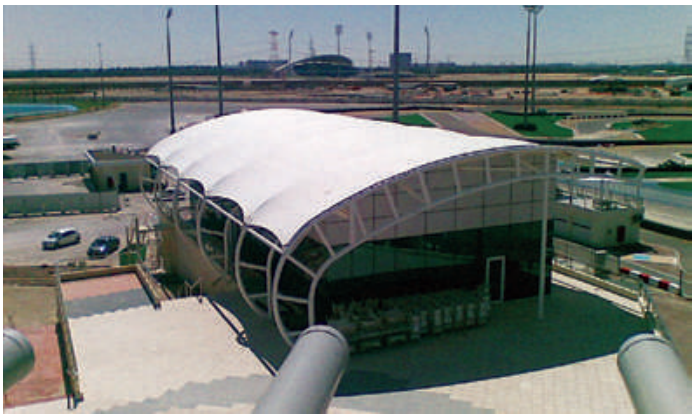
ROOF DESIGN HITS THE MARK FOR ABU DHABI'S FIRST SHOOTING CLUB

TITLE	Abu Dhabi Shooting Club
DESCRIPTION	Restaurant rooftops
LOCATION	Abu Dhabi, UAE
COMPLETED IN	2009
FABRIC AREA	1,650m²
FABRIC TYPE	PTFE – Fibertop C3028
ARCHITECT/CLIENT	Atkins

structurflex



ABU DHABI SHOOTING CLUB
ABU DHABI, UAE

The challenge – improve existing design concept to create a more practical solution

The Abu Dhabi Shooting Club was the first commercial shooting range to open in Abu Dhabi. Located at a purpose-built extension of the prestigious Armed Forces Officers' Club, the club has a target 25m shooting range and a broad range of amenities, including indoor and outdoor lounge areas and a coffee shop with a full service menu.

Structurflex was contracted to provide tensile membrane roofs for hospitality areas at the club. We recognised early on that the initial roof concepts had potential water ponding problems, so used our design expertise to improve the proposed roof designs.

The solution – a practical, economical roof that's compatible with the original architectural concept

The Structurflex technical and design teams delivered a practical and economical solution that eliminated water ponding risk and reduced the amount of steel framing required. Our improved design also stayed true to the original concept, so the project architect was happy to approve all our suggested modifications.

Following the finalisation of the design, our team proceeded with full engineering, fabrication and installation of the steel frames and tensile membranes. Our inputs and dedication to achieving the best possible outcome was highly appreciated by all parties involved with the project.

FAST TRACK SOLUTION DEVELOPED FOR DESERT SHOPPING MALL

TITLE	Dubai Outlet Mall
DESCRIPTION	Central atrium roof
LOCATION	Dubai, UAE
COMPLETED IN	2007
FABRIC AREA	3850m²
FABRIC TYPE	PVC – Mehler FR1000M / Mehler FR900M
ARCHITECT/CLIENT	Al Ahli Holding Group

structurflex

DUBAI OUTLET MALL
DUBAI, UAE

The challenge – develop desert-proof roof design at extremely short notice

Developed by Al Ahli Holding Group, Dubai Outlet Mall is the only outlet mall in the Middle East. It is home to more than 1,200 of the world's premium brands. Its desert location makes it vulnerable to sand storms and extreme heat.

Our first contact with this project resulted in the development of an iconic roof concept. However circumstances made it necessary for our client to put the project on hold for several months. Then suddenly the brakes came off and we were asked to submit a new roof design that could be installed in an extremely short time frame. Our client was counting down to a grand opening date and needed to fulfil obligations to tenants.

The solution – an eye-catching, economical roof that could be quickly installed

A practical but aesthetically-pleasing concept was quickly prepared by the Structurflex technical and design teams. Following design approval, we fast-tracked all project activities to ensure delivery within the tight timeframe.

The steel frame was fabricated and installed by the client, with guidance from our team. The engineering, fabrication and installation of the PVC membrane were completed entirely by Structurflex.

Our client was very pleased with the outcome. The eye-catching hemisphere roof gives the mall point of difference that can be seen from afar.

ICONIC SPORTING VENUE PROVES A WINNER

TITLE	Westlake Girls High School Sports Facility
DESCRIPTION	Tension membrane structure for netball and tennis courts
LOCATION	Auckland, New Zealand
COMPLETED IN	2012
FABRIC AREA	3500m²
FABRIC TYPE	Ferrari 1002T2 / ETFE
ARCHITECT/CLIENT	Creative Spaces / Westlake Girls High School

structurflex

WESTLAKE GIRLS HIGH SCHOOL SPORTS FACILITY
AUCKLAND, NEW ZEALAND

The challenge – create a continuous canopy for netball and tennis courts on difficult ground conditions, without disrupting the school's academic calendar

Westlake Girls High School on Auckland's North Shore has a reputation for high achievement. With a strategic focus on encouraging personal best, the school wanted to enable increased use of their netball and tennis courts by adding an all-weather canopy. The vision called for full light between each netball court with more shade for on-court players.

In any school environment, student safety and continuity of learning are paramount. A well-managed, short construction period was essential. The project was also challenged by unusually bad weather and the discovery of inconsistent ground conditions.

Our solution – innovative design concepts, disciplined execution and collaborative problem-solving

Structurflex was responsible for all structural engineering, as well as the supply, fabrication and installation of all components. Working with architects Creative Spaces, Structurflex developed fabric connection details that satisfied the architect's vision while ensuring a weathertight solution. This included the design and manufacture of a custom guttering system.

The architect's vision for conveying intense natural light between the courts was effectively achieved by combining PVC coated membrane with ETFE foil. The contrast between translucency characteristics of the materials ensures a pattern of comfortable shading and full natural light.

Controlled, systematic and efficient implementation enabled Structurflex to meet the short construction timeframe. Collaborating with ASPEC Construction, the main contractor, Structurflex engineers were able to resolve ground condition challenges to the foundations without adjusting the project completion date.

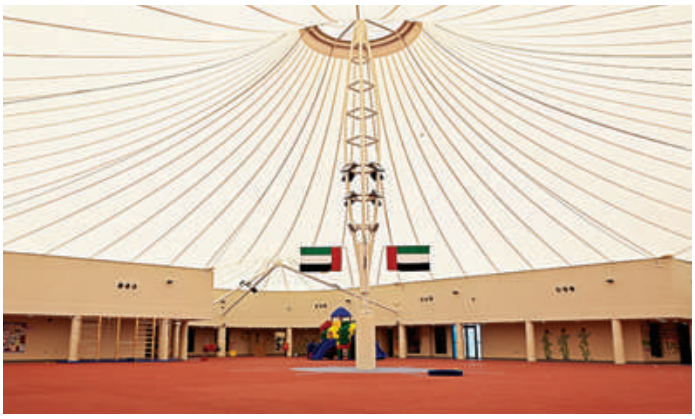
The new sporting venue has been highly praised by students, visiting players, teachers, parents, the local community and even motorists on the adjacent motorway. Even more importantly, with the courts in use day and night in any weather, more people are rediscovering their personal best.

IAA Outstanding Achievement Award – 2013

CREATING ALL-WEATHER OUTDOOR AREAS FOR THREE AL AIN SCHOOLS

TITLE	Al Ain Kindergartens
DESCRIPTION	Kindergarten courtyard roofs
LOCATION	Al Ain, UAE
COMPLETED IN	2009
FABRIC AREA	2000m² (each)
FABRIC TYPE	PVC – Mehler FR1000 & FR700M
ARCHITECT/CLIENT	Parsons

structurflex



AL AIN KINDERGARTEN
AL AIN, UAE

The challenge – cover courtyard areas in a way that enhances existing architecture

Al Ain's desert climate can be extreme. From May to August, temperatures frequently top 50°C; there are occasional sand storms; and the city's proximity to the Hajar mountains makes rain relatively common, compared to other parts of the UAE. Schools need to provide covered outdoor areas for students, so that they can get fresh air and exercise without exposure to the elements.

Stucturflex was contracted to provide membrane roofs for the courtyard areas of three schools in Al Ain. As well as ensuring the roofs would withstand climatic challenges, it was important to stay true to the architect's original design concept.

The solution – striking PVC membrane roofs installed by mobile crane

Working with a concept drawings provided by our client, we engineered, fabricated and installed the three membrane roofs well within the required time and cost parameters.

The school environment and space constraints made it necessary to develop safe methodology to install the steel structures and membranes using mobile cranes positioned outside the courtyard area. The resulting roofs have been very well-received by everyone involved.

SOPHISTICATED OUTDOOR MARKET WITH A TRADITIONAL LOOK AND FEEL

TITLE	Vegetable, Meat and Fruit (VMF) Market
DESCRIPTION	Canopy roof for outdoor market
LOCATION	Al Ain, UAE
COMPLETED IN	2004
FABRIC AREA	3,000m²
FABRIC TYPE	PVC – Mehler FR1000M
ARCHITECT/CLIENT	Al Ain Municipality

structurflex

VEGETABLE, MEAT AND FRUIT (VMF) MARKET
AL AIN, UAE

The challenge – heat and sun protection that's compatible with authentic architecture

Compared to other large cities in the UAE, which are characterised by ultra-modern skyscrapers, Al Ain has maintained a more authentic Arabic look and feel. Known as the 'Garden City of the Gulf', Al Ain has been continuously inhabited for more than four thousand years and is considered central to the cultural heritage of the UAE.

The purpose-built VMF (vegetable, meat and fruit) market was designed to be visually sympathetic with Al Ain's heritage. Central to the market's success was a large outdoor area, which required protection from the ever-present Arab sun.

The solution – tension membrane structures that embrace Arab design values

Structurflex developed three different styles of tensile membrane structures for Al Ain's new market. All were designed to blend harmoniously with the classical theme of the adjoining masonry buildings.

Because tension membranes are translucent, the natural light level beneath the canopies is higher. Shoppers can easily see the produce they're buying, but they're at no risk of sunburn or overheating – PVC reflects heat and provides 100% UV protection. The light-filtering provided by the canopies also makes the transition from harsh outdoor light to indoor environments easier on the eyes.

UNIQUE CANOPY GIVES SOCCER STADIUM AN AESTHETIC POINT OF DIFFERENCE

TITLE	Rio Tinto Stadium
DESCRIPTION	New soccer stadium
LOCATION	Salt Lake City, Utah USA
COMPLETED IN	2008
FABRIC AREA	70,000ft²
FABRIC TYPE	PTFE – Sheerfill II
ARCHITECT/CLIENT	Rossetti / SCP Worldwide

structurflex

RIO TINTO STADIUM
SALT LAKE CITY, UTAH USA

The challenge – turn a functional stadium into something iconic

As major league soccer continues to grow in the United States, there is an increasing need for soccer-specific stadiums. As well as delivering much needed facilities, stadiums have an opportunity to provide iconic architecture that adds value to the cityscape.

Without its Structurflex canopy, Rio Tinto Stadium would have lacked the visual impact essential in today's stadia. This project is an example of how a well-designed tensile membrane roof can visually transform an ordinary-looking construction.

The solution – a translucent roof that's both practical and spectacular

From early concept stages through to installation, Structurflex was closely involved in the process that brought the stadium to fruition. The development of unique and flexible detailing allowed Structurflex to complete the roof installation ahead of schedule, with no compromise in performance.

The PTFE-coated fiberglass membrane chosen has the perfect translucency for this project. During the day the membrane screens out UV and excess heat, while still allowing natural light to reach seating areas. At night, the membrane becomes a stage for dramatic lighting effects that add visual excitement to the playing field.

This stadium will provide decades of excellent performance. The membrane's durability and inherent ability to shed dirt and debris will ensure it looks good year after year.

ICONIC SPORTS STADIUM THAT'S HELPING TO RE-ESTABLISH COMMUNITY PRIDE

TITLE	PPL Park
DESCRIPTION	Sports stadium roof
LOCATION	Chester, Pennsylvania, USA
COMPLETED IN	2010
FABRIC AREA	60,000ft²
FABRIC TYPE	PTFE–Sheerfill II
ARCHITECT/CLIENT	Rossetti / Delaware County

structurflex

PPL PARK
CHESTER, PENNSYLVANIA USA

The challenge – provide an architectural high point for new soccer stadium

The city of Chester, next to Philadelphia, is re-inventing itself after decades of decline. By building PPL Park, a soccer-specific stadium at the base of the Commodore Barry Bridge, the city hoped to kick start renewed life and vitality in an important historic location.

A key challenge for this project was cost. Project directors recognised that a lightweight tensile membrane roofing system would meet functional and aesthetic requirements for much less than a traditional roofing system. Other challenges included a tight timeframe and difficult site access.

The solution – early input and a full service package for a result the community loves

Our experience with the Rio Tinto stadium in Salt Lake City, and the reputation it has with the soccer community, gave us the edge to win this important contract. The tension membrane roof was the iconic architectural element for the Rio Tinto stadium, as it would be for this project.

Structurflex provided early design input, because it was important to integrate the membrane engineering with other vital elements, such as water drainage, wiring and media systems. We recommended PTFE-coated fibreglass, due to its superior translucency, longevity, fire rating and strength. Once the design was finalised, we provided the final engineering package, full tensile membrane system and complete installation.

Chester is immensely proud of its new stadium. It has become a symbol of optimism and renewal for the oldest city in Pennsylvania.

SMOOTH MEMBRANE CEILING FOR WORLD CUP STADIUM

TITLE	Arena Corinthians, 2014 World Cup
DESCRIPTION	Stadium
LOCATION	Sao Paulo, Brazil
COMPLETED IN	2014
FABRIC AREA	30,000m^2
FABRIC TYPE	Ferrari Precontraint 1002
ARCHITECT/CLIENT	Anibal Coutinho / Corinthians Football Club

structurflex

ARENA CORINTHIANS, 2014 **WORLD CUP** SAO PAULO, BRAZIL

The challenge – fast track installation from the underside

The Arena Corinthians hosted the opening ceremony and first game of the 2014 FIFA World Cup. Construction took longer than expected and as the opening ceremony drew closer, the stadium's completion came under the glare of the world's media.

Structurflex were contracted to provide a PVC membrane ceiling for the roof above the stands in double-quick time. The architect's vision demanded a smooth visible surface, so we were required to install the material from the underside of the roof's steel structure – something of a circus act, even for an experienced team.

The solution – custom extrusions and a talented installation team

There was zero tolerance for re-work or delay with this project. As well as getting our specific tasks exactly right, we had to do whatever we could to assist other facets of the roof construction. Efficient scheduling, quality control and open communication, in spite of language barriers, were crucial components of our approach.

To facilitate installation from the underside, we designed, tested and manufactured a custom extrusion. We also assembled and coordinated a multi-cultural team of expert installers to safely attach the extrusions and install the membrane ceiling. To meet our deadline, we anticipated problems before they could arise and maintained contact with the general contractor.

The arena roof was completed on time and has received outstanding reviews.

LANDMARK DESIGN BUILD PROJECT FOR HISTORIC RAILWAY STATION

TITLE	Denver Union Station
DESCRIPTION	Train hall structure, waiting and drop-off canopies and more
LOCATION	Denver, Colorado, USA
COMPLETED IN	2009 - 2013
FABRIC AREA	7,432m^2 / 80,000ft^2
FABRIC TYPE	PTFE Coated Fibreglass, Single Layer ETFE
ARCHITECT/CLIENT	SOM / Denver Union Station & RTD

structurflex

DENVER UNION STATION
DENVER, COLORADO, USA

The challenge – complex project with a large design-engineer-build team

Union Station in the City of Denver, which dates back to 1881, has been undergoing a massive US$500m renovation since 2009. The station has added new commuter rail, Amtrak, light rail and bus terminals, 1.35 million square feet of mixed-use development and new civic spaces. The station is a very important part of Denver's vibrant urban core.

The scope of work was large, comprising 8 different structures. Structurflex joined the project to design and deliver a vast membrane roof for the train hall structure and canopies for waiting and drop-off areas. Structurflex specialists were part of a large team that included world-class architects SOM, engineers, contractors, steel fabricators, steel erectors and other trades. Challenges faced include a large amount of design development and coordination, engineering, intricate detailing coordination, fabrication schedules and installation while other trades were working in the same area.

The solution – constant communication and coordination with all team members

Recognising that constant coordination with all parties was necessary to achieve problem-free progress, the Structurflex team attended many meetings, conference calls and web conferences. Structurflex also maintained direct lines of communication with the engineer, architect, general contractor, steel fabricator and steel erector. During the project Structurflex's ability to work within a team and stay on top of every facet of execution has been highly praised by other team members.
